# INTRODUCTION

---

The application, CipherLab OEMConfig, is installed on your ReMoCloud enrolled devices by default. With CipherLab OEMConfig, users can easily deploy the **ADC (Android Deployment Configurator)** projects to the enrolled devices through ReMoCloud.

- Supports CipherLab Android 6, Android 7, Android 8, Android 9, Android 10, Android 11, and Android 12 mobile computers with GMS certificated.
  - RS31 Mobile Computer (Android 7)
  - RS35 Mobile Computer (Android 10 & Android 11)
  - RS36 Mobile Computer (Android 12)
  - RS51 Mobile Computer (Android 8 & Android 11)
  - HERA51 Mobile POS (Android 8 & Android 11)
  - RK25 Mobile Computer (Android 7, Android 9 & Android 11)
  - RK26 Mobile Computer (Android 12)
  - RK95 Mobile Computer (Android 9 & Android 12)
- Fully control your CipherLab mobile computers.
- Easy to install Apps on your enrolled devices.

# Chapter 1

## CHAPTER 1. PREREQUISITE

---

The chapter lists all the required items you need for deploying the **ADC (Android Deployment Configurator)** project settings to your enrolled devices through ReMoCloud.

### IN THIS CHAPTER

---

1.1 ReMoCloud Account & Password .....	8
1.2 Android Deployment Configurator .....	9
1.3 SD Card or USB Drive.....	10

## 1.1 REMOLOUD ACCOUNT & PASSWORD

Please contact your local sales representative for account application and fill out the request form. Start by visiting the ReMoCloud login page at <https://remocloud.cipherlab.com/login> and click on “**New account registration**” to access the request form.

The screenshot shows the ReMoCloud login interface. At the top is the ReMoCloud logo with a "verified by Google EMM" badge. Below it are fields for "Enter e-mail" and "Enter Password", both with placeholder text. There is a "Remember Me" checkbox and a "Sign In" button. A red dashed box highlights the "New account registration" link below the password field. At the bottom, a note states: "By clicking SUBMIT button to login CipherLab ReMoCloud, you acknowledge that you consent to the Terms and Conditions and CipherLab's Privacy Policy."

The screenshot shows the "ReMoCloud Account Request Form". It includes fields for "E-mail", "Name" (First Name and Last Name), "Company", "Job Title", "Phone", "Country" (set to Afghanistan), and "RemCloud License" (a dropdown menu). A red dashed box encloses the entire form area. At the bottom, a warning message reads: "\*Warning: Please do not use a personal email or an email tied to one individual. Once the account has been set up it is locked to the activation email and can not be changed." To the right is a "Submit" button.

Please complete the fields in the request form and submit it. The local sales representative will contact you soon afterwards. Log into ReMoCloud website once you get your ReMoCloud account and password.

## 1.2 ANDROID DEPLOYMENT CONFIGURATOR

Download the latest version of **ADC (Android Deployment Configurator)** program installer from <http://wmds.cipherlab.com/ADC> to your PC and run it by following its on-screen instructions.

The screenshot shows the download page for the Android Deployment Configurator. It has three main sections:

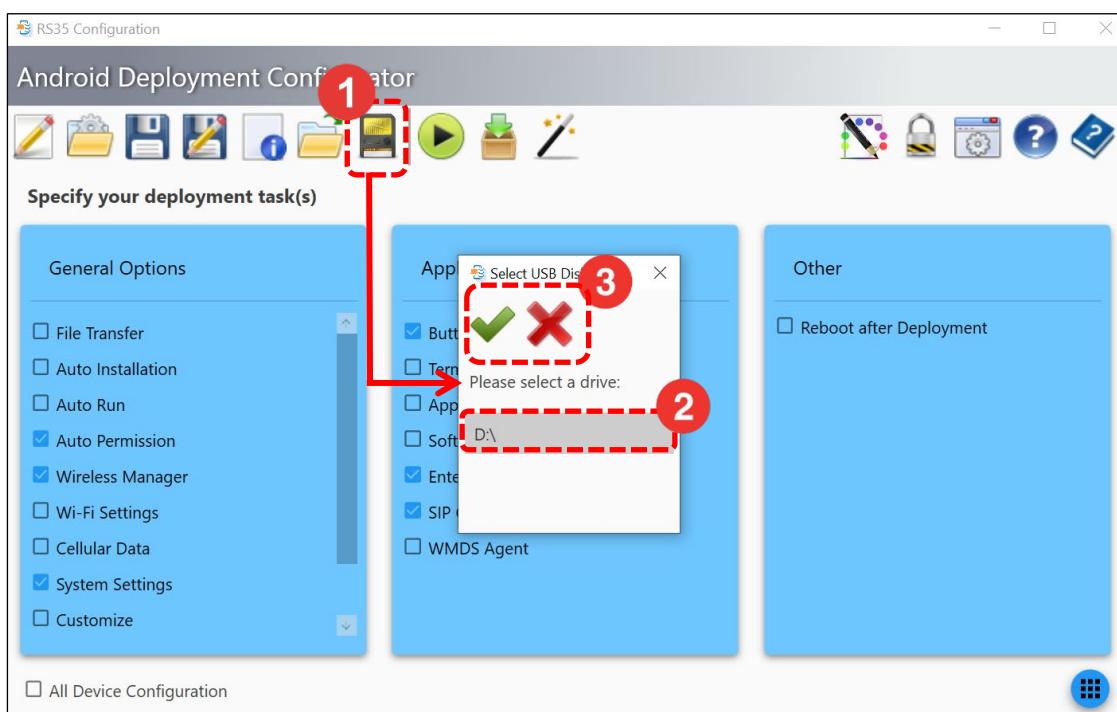

- Application Download:** Shows a cloud icon with a download arrow. Text: "Latest Version: 1.3.4". Buttons: "[Download latest version](#)" (highlighted with a red box) and "[Full list for current and archived versions](#)". A callout bubble says: "Click to download ADC program installer."
- Can not install?**: Shows an info icon. Text: "Can not install?". Buttons: "[How to determine whether Microsoft .NET Framework has been installed on the computer?](#)" and "[Download Microsoft .NET Framework](#)".
- User Guide**: Shows a document icon. Text: "User Guide". Buttons: "[Download latest user guide](#)" (highlighted with a red box) and "[Full list for current and archived versions](#)". A callout bubble says: "Click to download ADC user guide for reference."

For the details about Android Deployment Configurator, please refer to the latest [ADC User Guide for Android](#).

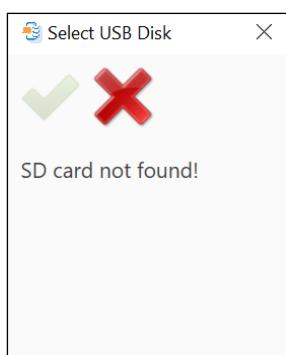

### 1.3 SD CARD OR USB DRIVE

Before saving or exporting projects from Android Deployment Configurator to an SD card or USB drive, make sure to connect the SD card or USB drive to your computer.

After configuring the project settings, click “**Save current project to SD card**” to choose the drive (either an SD card or a USB drive) where you want to save the project.

If the SD card or USB drive is not connected successfully, a window will appear with the message “**SD card not found!**”.

# Chapter 2

## CHAPTER 2. ADC ZIP FILE

---

The chapter specifies how to derive your ADC project settings from **Android Deployment Configurator**, and how to create the URL for your devices to download and apply the ADC project settings.

### IN THIS CHAPTER

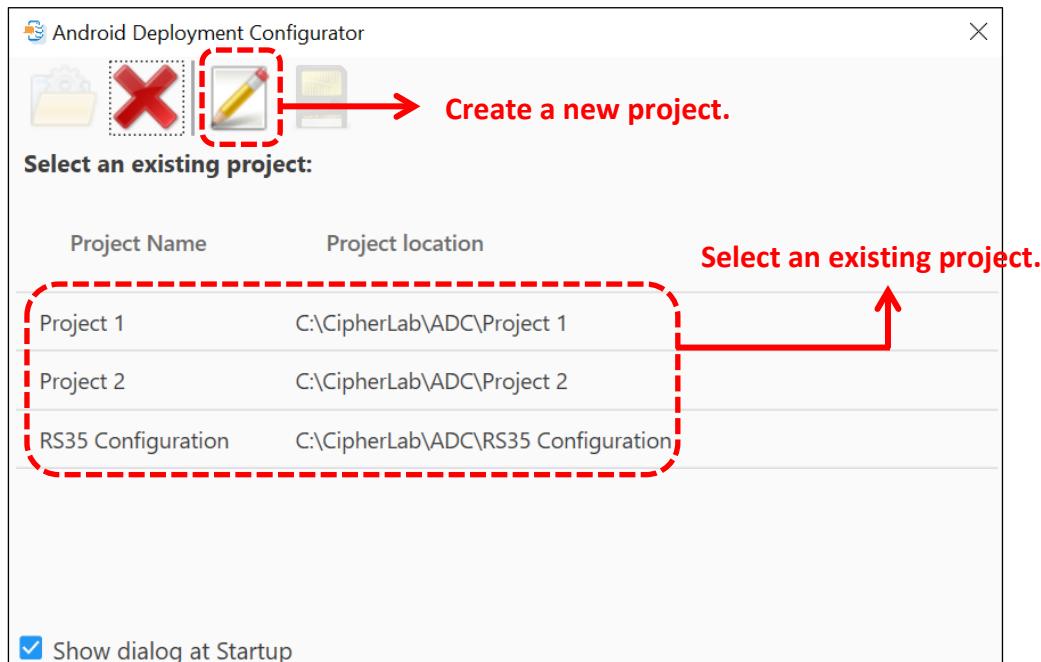

---

2.1 Save the Project from ADC.....	12
2.2 Create a Zip File & URL.....	14

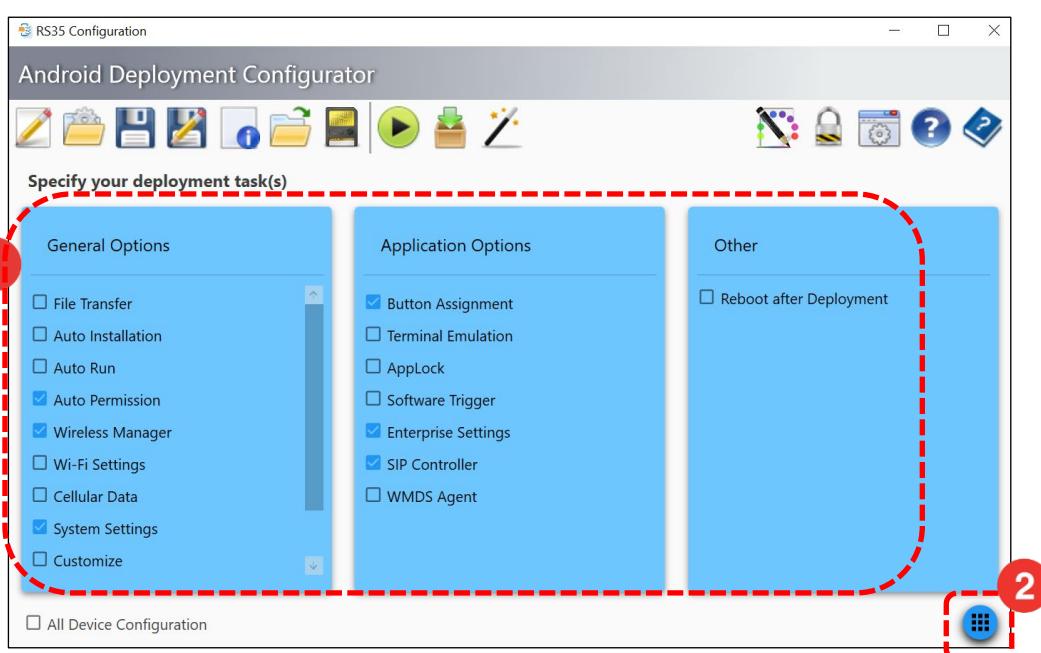

## 2.1 SAVE THE PROJECT FROM ADC

To save the projects from Android Deployment Configurator to an SD card or USB drive, please connect an SD card or USB drive to your computer in advanced, and follow the instructions below.

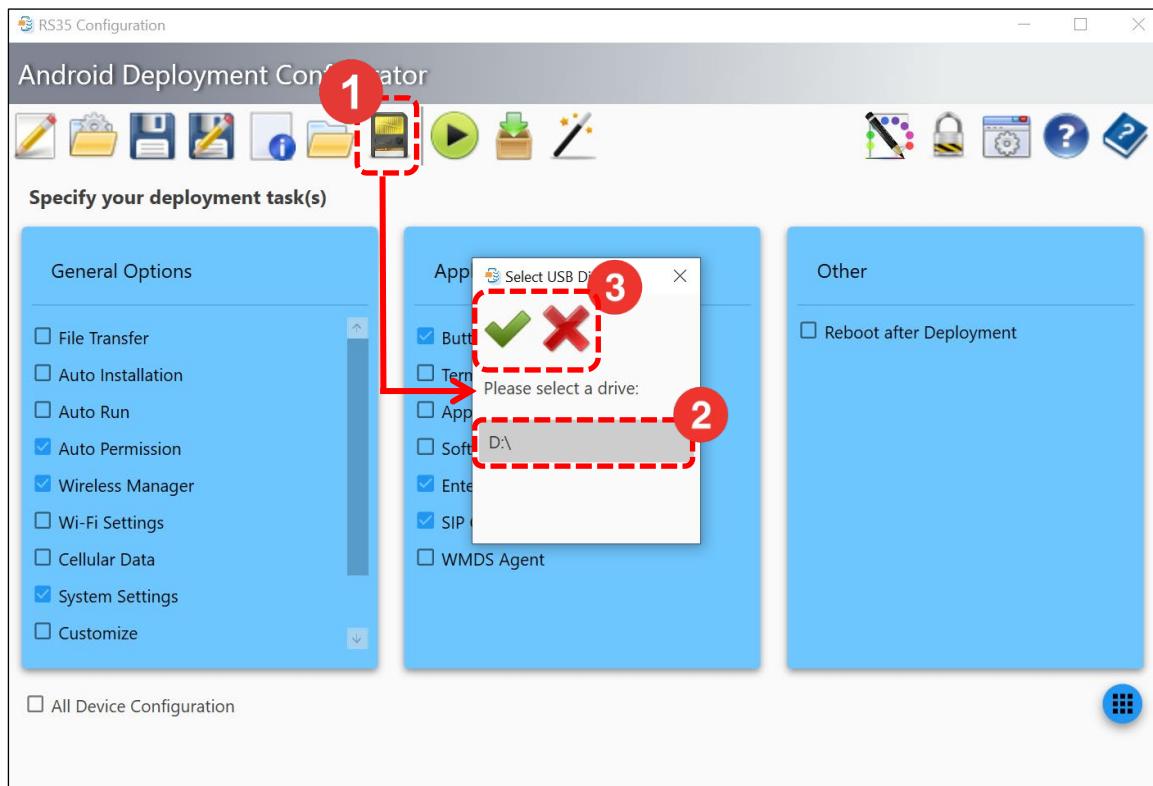

- 1) Launch **Android Deployment Configurator** and choose either an existing project or create a new one, depending on your preferred deployment settings.

- 2) On the project's Main Screen, select the configuration options, and then click on "Configure..."  to access the setting page to further specify your deployment tasks.

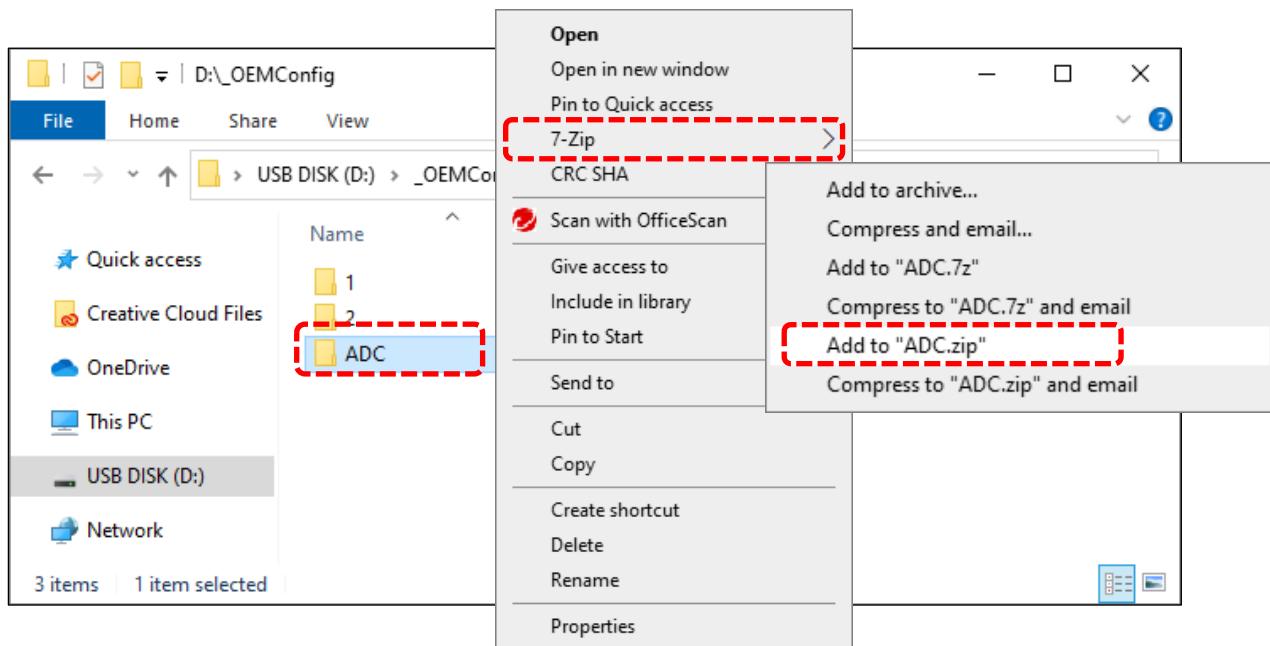

- 3) After configuring the project settings, click “**Save current project to SD card**” to choose the drive (either an SD card or a USB drive) where you want to save the project.

## 2.2 CREATE A ZIP FILE & URL

- 1) Find the ADC project which is shown as a folder with the name “ADC” saved on your SD card or USB drive.
- 2) Right-click on the ADC folder to compress it into a zip file.

- 3) Upload the zip file to a cloud storage platform to generate a sharable link, and then copy this link.

The screenshot shows the Amazon S3 'Objects' page. At the top, the navigation path is: Amazon S3 > Buckets > support-service > Android Products/ > Software User Guide/ > ReMoCloud/ > CipherLab ADC Module/. Below the path, there is a 'Copy S3 URI' button. The main area displays a table of objects:

Name	Type	Last modified	Size	Storage class
ADC.zip	zip	October 23, 2023, 13:38:33 (UTC+08:00)	11.4 KB	Standard
CipherLab Agility Intelligence Service User Guide_v1.3.0.pdf	pdf	October 20, 2022, 11:53:38 (UTC+08:00)	8.0 MB	Standard

The following instructions demonstrate how to create URL through Amazon S3.

- 1) Locate the zip file in Amazon S3 and select it.
- 2) Click “Copy URL” for the selected file.

CipherLab ADC Module/

**Objects (2)**

Objects are the fundamental entities stored in Amazon S3. You can use [Amazon S3 inventory](#) to get a list of all objects in your bucket. For others to access your objects, you'll need to explicitly grant them permissions. [Learn more](#)

Name	Type	Last modified	Size	Storage class
<input checked="" type="checkbox"/> <a href="#">ADC.zip</a>	zip	October 23, 2023, 13:38:33 (UTC+08:00)	11.4 KB	Standard

**Actions**

- [Copy S3 URI](#)
- [Copy URL](#)
- [Download](#)
- [Open](#)
- [Delete](#)
- [Actions ▾](#)
- [Create folder](#)
- [Upload](#)

[Find objects by prefix](#)  Show versions

A green notification confirms the URL has been copied.

CipherLab ADC Module/

**Objects (2)**

Objects are the fundamental entities stored in Amazon S3. You can use [Amazon S3 inventory](#) to get a list of all objects in your bucket. For others to access your objects, you'll need to explicitly grant them permissions. [Learn more](#)

**Actions**

- [Copy S3 URI](#)
- [Copy URL](#)
- [Download](#)
- [Open](#)
- [Delete](#)
- [Actions ▾](#)
- [Create folder](#)
- [Upload](#)

[Find objects by prefix](#)  Show versions

- 3) Paste the URL into any editing area or field.

```
https://support-service.s3.ap-northeast-1.amazonaws.com/Android+Products/Software+User+Guide/ReMoCloud/CipherLab+ADC+Module/ADC.zip
```

- 4) Replace "...amazonaws.com" with "**d2b20xz24496kr.cloudfront.net**" in the URL.

<https://support-service.s3.ap-northeast-1.amazonaws.com/Android+Products/Software+User+Guide/ReMoCloud/CipherLab+ADC+Module/ADC.zip>

d2b20xz24496kr.cloudfront.net

- 5) Save the edited URL for **CipherLab OEMConfig** deployment.

<https://d2b20xz24496kr.cloudfront.net/Android+Products/Software+User+Guide/ReMoCloud/CipherLab+ADC+Module/ADC.zip>

# Chapter 3

## CHAPTER 3. CIPHERLAB OEMCONFIG

---

The chapter introduces the default app “**CipherLab OEMConfig**”, which allows ReMoCloud administrators to configure the device settings. Please note that “**CipherLab OEMConfig**” operates in the background and, as a result, it will not be visible on the enrolled device.

Through “**CipherLab OEMConfig**”, your ADC(Android Deployment Configurator) projects can be deployed to your enrolled devices.

### IN THIS CHAPTER

---

3.1 Overview of Manage App Config Page .....	18
3.2 DeployFromZip .....	22
3.3 Other Important Settings .....	24

### 3.1 OVERVIEW OF MANAGE CONFIG PAGE

This section provides an overview of “Manage Config” within **CipherLab OEMConfig**, including instructions on accessing the page and introductions to the settings.

To manage the configuration of a profile within “**CipherLab OEMConfig**” through ReMoCloud, please follow the steps below:

#### 1) Access Profile>Profile Name>Profile Information>App

The screenshot illustrates the navigation flow within the ReMoCloud interface:

- Top Level:** The main navigation bar includes the ReMoCloud logo, a search bar, and buttons for Add, Import, Assign, Copy, and Delete.
- Left Sidebar:** A vertical sidebar lists various EMM-related sections: Deployment Profile (highlighted with a red dashed box), Enrollment, Monitor, Device, Group/Site, App, Management, Account, Management, and Log.
- Profile Page:** This page displays a list of profiles. One profile, "Create\_Test", is highlighted with a red dashed box and has a red arrow pointing down to the "Profile Information" page. Other profiles listed include Create\_Copied, DTS, HCT, Profile\_1, RK25, RoundDay, Testing, and Testing\_for\_rollback.
- Profile Information Page:** This page shows the details for the selected profile ("Create\_Test"). It includes fields for Version (set to 17), Back button, Create\_Test title, and Device Setting tab. Below this, the "APP" tab is selected, showing a table of app configurations. The table columns are: App Name, Package Name, Managed by, App Update Mode / Version, App Permissions, and Manage Config.

App Name	Package Name	Managed by	App Update Mode / Version	App Permissions	Manage Config
CipherLab Device Health	sw.programme.devicehealth	Google	AUTO_UPDATE_HIGH_PRIORITY ▾	<a href="#">Edit</a>	
CipherLab LogCollection	sw.programme.logcollection	Google	AUTO_UPDATE_DEFAULT ▾	<a href="#">Edit</a>	
CipherLab OEMConfig	com.cipherlab.oemconfig.common	Google	AUTO_UPDATE_DEFAULT ▾	<a href="#">Edit</a>	<a href="#">Edit</a>

- 2) Locate “**CipherLab OEMConfig**” and click on “**Edit**” under “**Manage Config**”.

The screenshot shows the 'Profile Information' page with a list of apps. The 'CipherLab OEMConfig' app is highlighted with a red box. An arrow points from this box to the 'Edit' button under the 'Manage Config' column for the same app, which is also highlighted with a red box. Other apps listed include 'CipherLab Device Health' and 'CipherLab LogCollection'. The 'Manage Config' column contains an 'Edit' link for each row.

App Name	Package Name	Managed by	App Update Mode / Version	App Permissions	Manage Config
CipherLab Device Health	sw.programme.devicehealth	Google	AUTO_UPDATE_HIGH_PRIORITY	<a href="#">Edit</a>	
CipherLab LogCollection	sw.programme.logcollection	Google	AUTO_UPDATE_DEFAULT	<a href="#">Edit</a>	
CipherLab OEMConfig	com.cipherlab.oemconfig.common	Google	AUTO_UPDATE_DEFAULT	<a href="#">Edit</a>	<a href="#">Edit</a>

The “**Manage Config**” page provides a range of setting options, including the following:

- (1) DeployFromZip
- (2) Wireless
- (3) Wi-Fi Advanced
- (4) Cellular Data
- (5) System Setting
- (6) System Update
- (7) Log Collection
- (8) Send Intent
- (9) Button Assignment
- (10) Reader Config
- (11) Enterprise Settings
- (12) Cold Chain
- (13) SIP Controller
- (14) Software Trigger
- (15) Other Settings

#### Note:

If the “**DeployFromZip**” setting shares the same parameters as other OEMConfig settings, the configuration applied to the enrolled devices will be determined by the “**DeployFromZip**” setting.

## CipherLab OEMConfig SOP

If “**CipherLab OEMConfig**” is not in the profile, click “**Add App**” to add it from **Managed Google Play**.

The screenshot shows two main sections of the ReMoCloud interface:

- Profile Information:** A top-level navigation bar with "Hello! John Smith" and user icons. Below it, a "Create\_Test" profile is selected with a version of 17. There are buttons for "Export", "Schedule", and "Save". The "APP" tab is active, showing a table of apps managed by Google. Two rows are visible:
 

App Name	Package Name	Managed by	App Update Mode / Version	App Permissions	Manage Config
CipherLab Device Health	sw.programme.devicehealth	Google	AUTO_UPDATE_HIGH_PRIORITY	<a href="#">Edit</a>	
CipherLab	sw.programme.logcollection	Google	AUTO_UPDATE_DEFAULT	<a href="#">Edit</a>	

 A red dashed box highlights the "Add App" button in the top right corner of the table header, and a red arrow points down to the "App Management" section below.
- App Management:** A separate section titled "App Management" under "EMM". It features a search bar with "CipherLab OEMConfig" and a list of apps:
 

App	Developer	Rating
CipherLab OEMConfig	CipherLab	★★★★★
Moto OEMConfig	Motorola Mobility LLC	★★★★★
Android Device Pol.	Google LLC	★★★★★
OEMConfig for HMD	HMD Global	★★★★★
Walmart: Shopping	Walmart	★★★★★

 A red dashed box highlights the search bar and the first app entry in the list.

Also note that a primary setting “**DeployFromZip**” should work in conjunction with “**CipherLab ADC Module**”. Find “**CipherLab ADC Module**” in the App list.

The screenshot shows the "Profile Information" section again, but now with an additional row for the "CipherLab ADC Module". The table now looks like this:

App Name	Package Name	Managed by	App Update Mode / Version	App Permissions	Manage Config
CipherLab Device Health	sw.programme.devicehealth	Google	AUTO_UPDATE_HIGH_PRIORITY	<a href="#">Edit</a>	
CipherLab LogCollection	sw.programme.logcollection	Google	AUTO_UPDATE_DEFAULT	<a href="#">Edit</a>	
<b>CipherLab ADC Module</b>	com.cipherlab.adcmodule.common	Google	AUTO_UPDATE_DEFAULT	<a href="#">Edit</a>	

A red dashed box highlights the entire row for the "CipherLab ADC Module".

If “**CipherLab ADC Module**” is not in the App list, click on “**Add App**” to add it from **Managed Google Play**.

The image consists of two screenshots of a software interface for managing mobile applications.

**Screenshot 1: Profile Information**

This screen shows the configuration for a device named "Create\_Test". The "APP" tab is selected, displaying a table of installed apps. One row is highlighted for "CipherLab Device" (package name: sw.programme.devicehealth). The "Managed by" column shows "Google" and the "App Update Mode / Version" dropdown is set to "AUTO\_UPDATE HIGH PRIORITY". On the right side, there are buttons for "Export", "Schedule", and "Save", followed by "WildCard Settings". A red dashed box highlights the "Add App" button, which is also pointed to by a red arrow originating from the "Add App" button in the second screenshot.

App Name	Package Name	Managed by	App Update Mode / Version
CipherLab Device	sw.programme.devicehealth	Google	AUTO_UPDATE HIGH PRIORITY

**Screenshot 2: App Management**

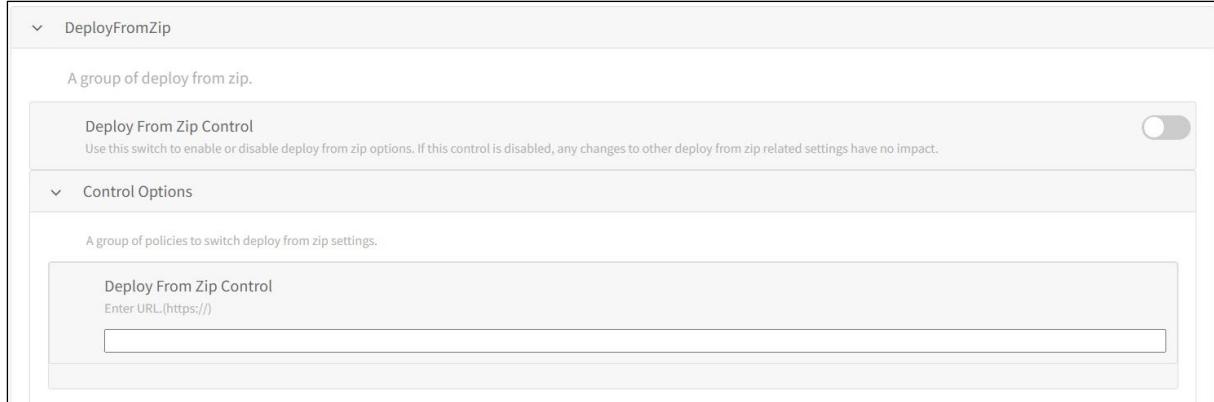

This screen shows the "App Management" interface with a "Google Play" search bar. The search term "CipherLab ADC Module" is entered, and a red dashed box highlights the search bar. Below the search bar, several app icons are listed, each with its name and developer. The "CipherLab ADC Module" icon (with two blue people) is highlighted with a red dashed box, indicating it is the target for addition.

- CipherLab OEMCo CipherLab
- CipherLab ADC Module** (highlighted)
- CipherLab Home CipherLab
- CipherConnect Pro CIPHERLAB
- CipherLab IntelliWe

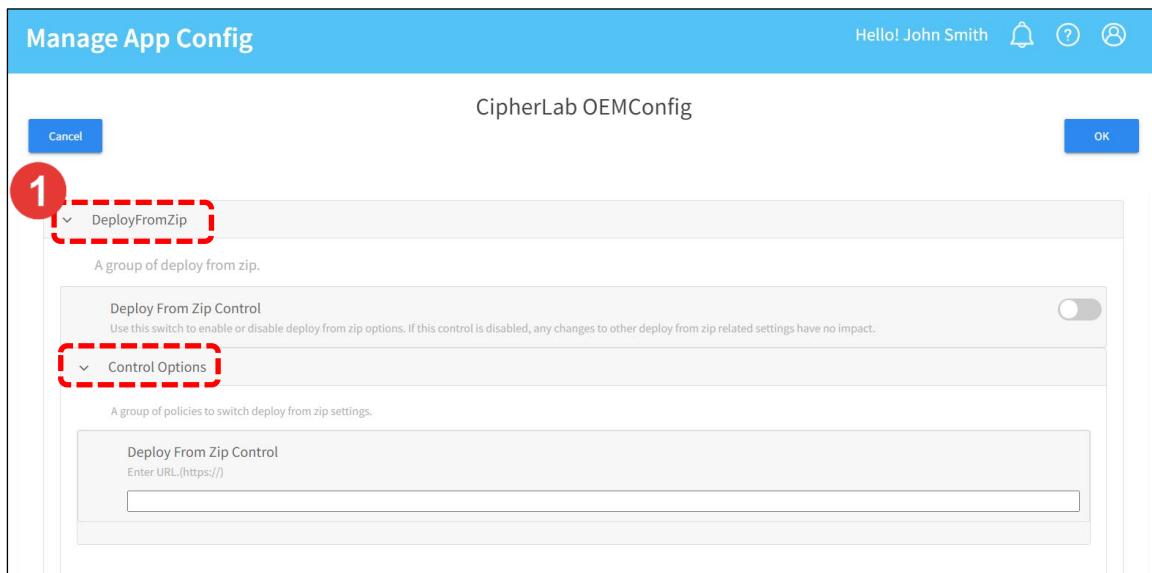

## 3.2 DEPLOYFROMZIP

On the “[Manage Config](#)” page within **CipherLab OEMConfig**, you can access and adjust the advanced settings. In the following section, we will introduce a key configuration: “**DeployFromZip**”.

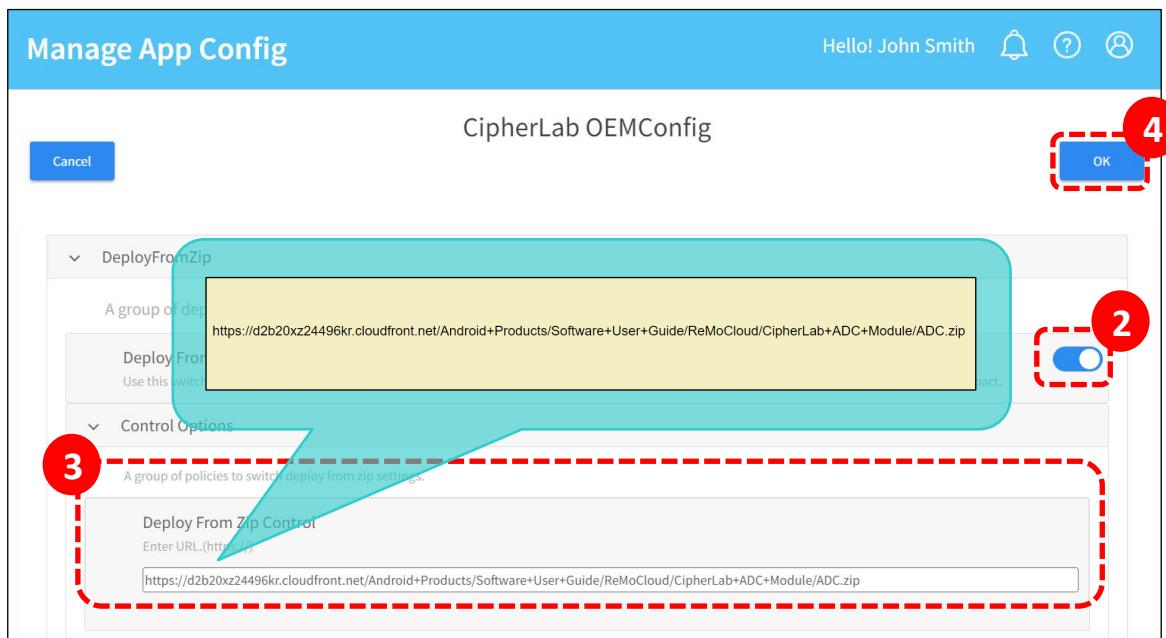

“**DeployFromZip**” is used to deploy the **ADC (Android Deployment Configurator)** project settings to the enrolled devices.

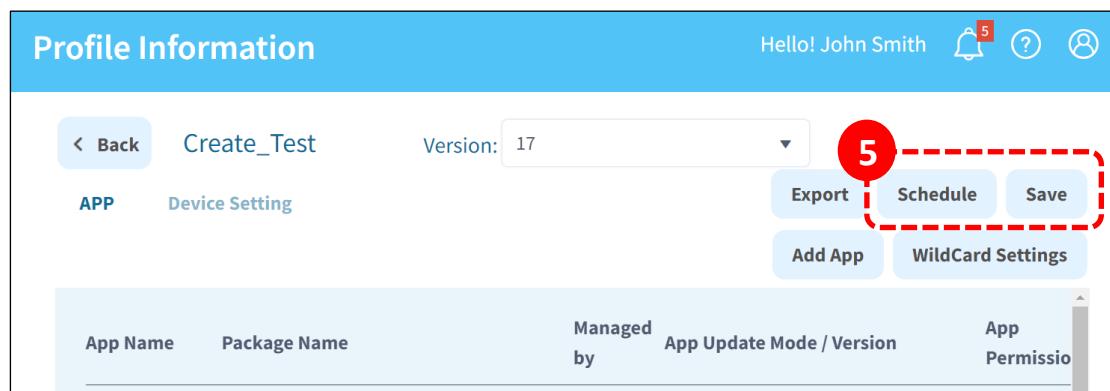

- 1) On the “[Manage Config](#)” page, click to unfold the settings of “**DeployFromZip**”. Unfold other settings for more configuration if necessary.

- 2) Enable “Deploy From Zip Control”.
- 3) Enter [the link you have created from the cloud storage](#) into the “Deploy From Zip Controls” field.
- 4) Click “OK” to save the settings before you navigate away from this page.

- 5) Click “Save” or “Schedule” on the “Profile Information” page to apply the changes. The enrolled devices that use this profile will automatically update their settings.

#### Note:

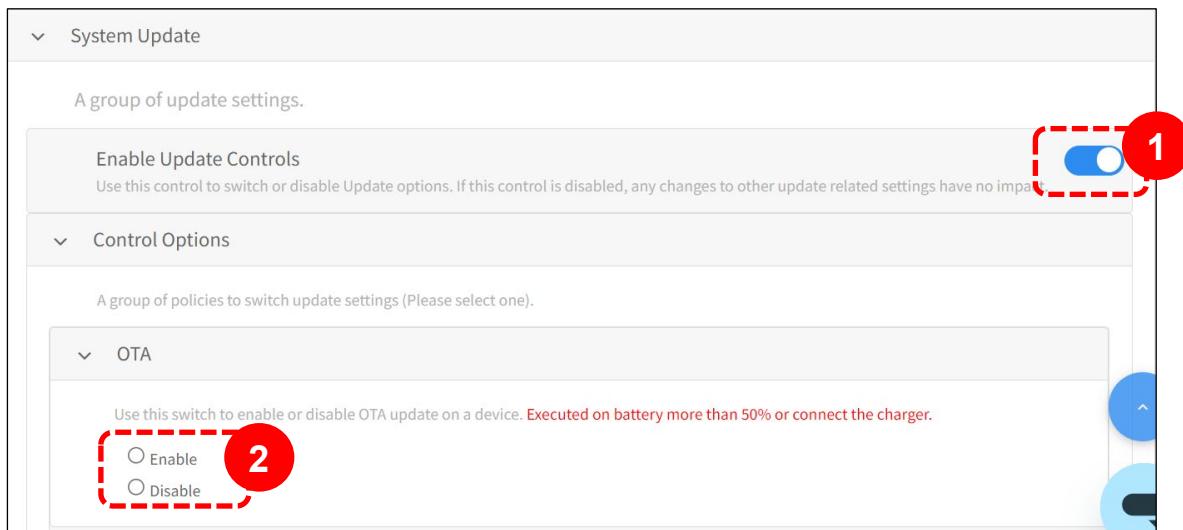

The enrolled devices in the profile shoud match the device model specified in the ADC project for deployment.

### 3.3 OTHER IMPORTANT SETTINGS

This section introduces other important **CipherLab OEMConfig** settings.

#### 3.3.1 SYSTEM UPDATE

- 1) Switch on or off to enable or disable **Update Controls**.
- 2) Click “**Enable**” to allow or “**Disable**” to disallow enrolled devices from performing an OTA system update.

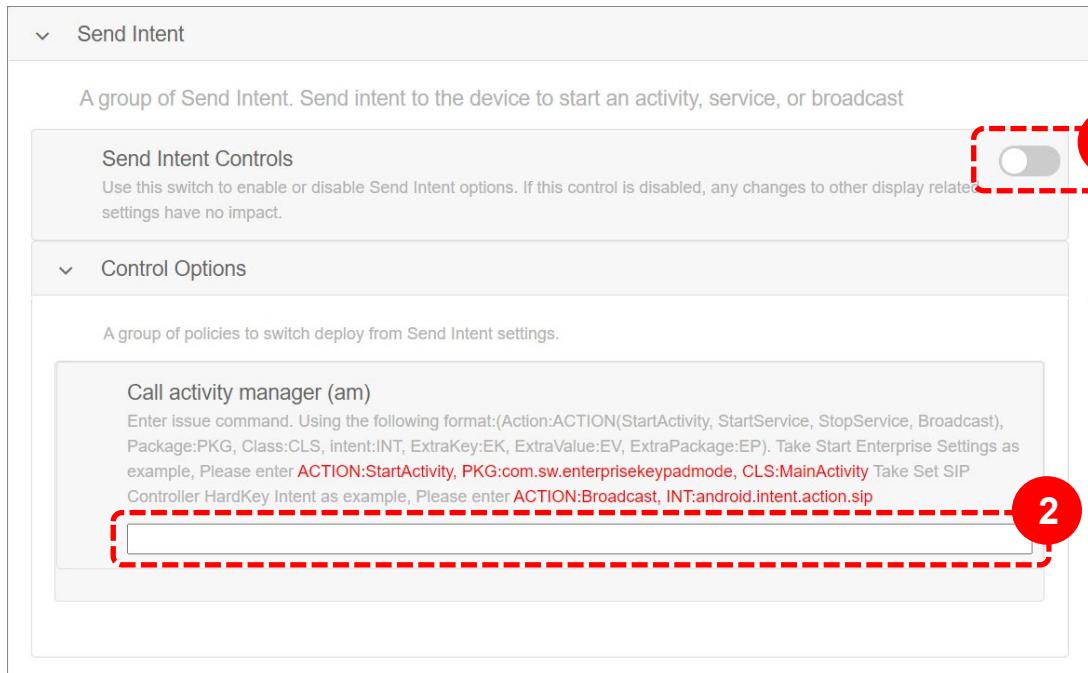

An over-the-air (OTA) update involves wirelessly delivering new software, firmware, or other data to mobile devices.

Please note that when the device's battery level falls below 50%, OTA updates cannot be performed. In such cases, ensure the enrolled device is connected to a power source before initiating the OTA update.

### 3.3.2 SEND INTENT

**“Send Intent”** is used to perform actions on the device’s screen, such as starting an activity, service or broadcast.

- 1) Switch on “**Send Intent Controls**”.
- 2) Enter the command in the specified format in the “**Call activity manager (am)**” field.

Take the following as examples:

- **Sart SIPController**

Enter issue command:

“ACTION:StartActivity, PKG:com.sw.android.sipcontroller, CLS:MainActivity”

Note:

To hide the keyboard, please set “null keybaord” for keyboard 1 & keyboard 2 on the device, and Intent should be ACTION:Broadcast, INT:android.intent.action.sip

- **Start SoftwareTrigger Icon**

Enter issue command:

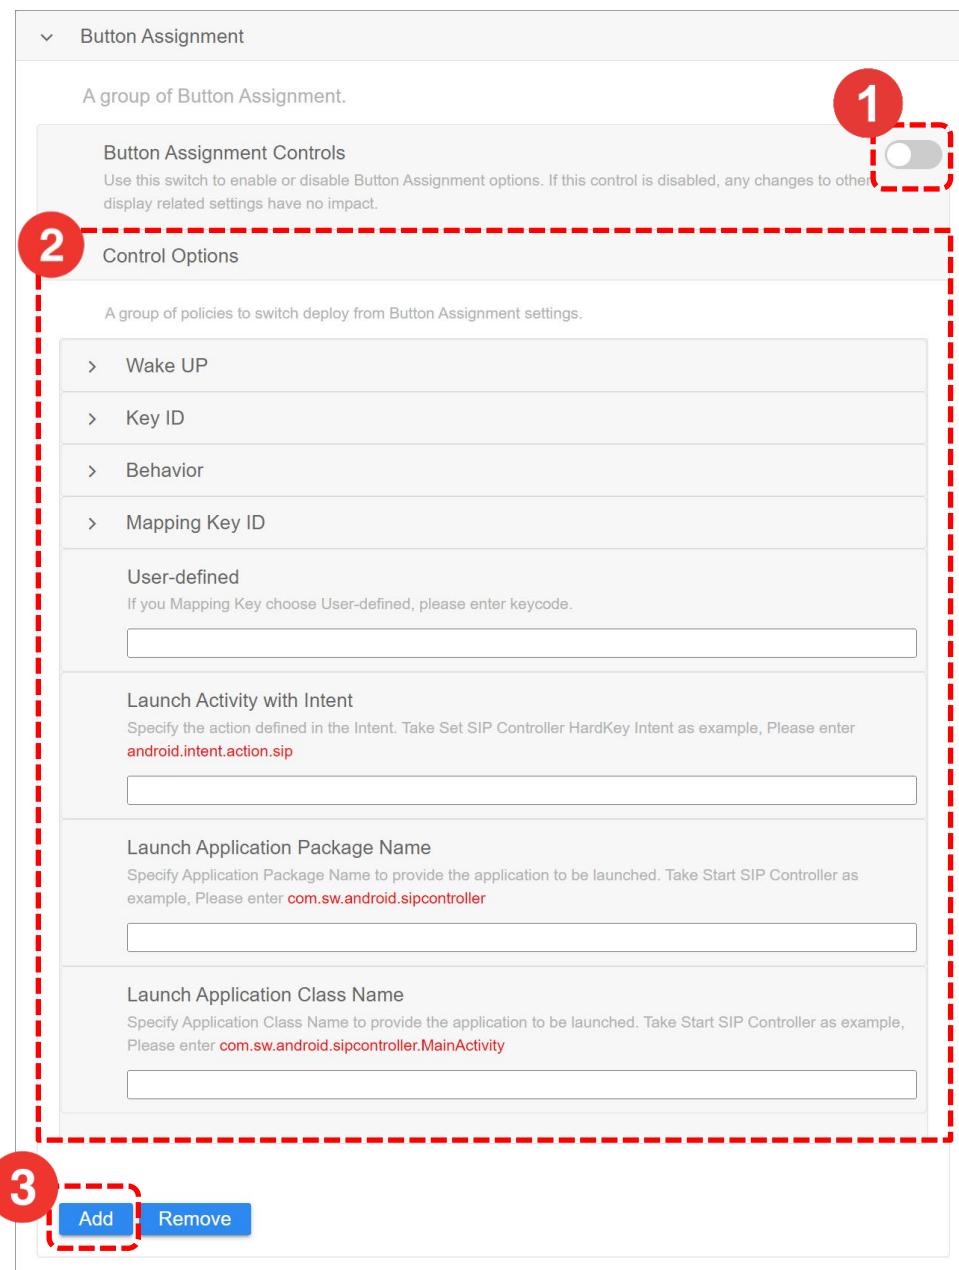

“ACTION:StartService, PKG:com.Cipherlab.SoftwareTrigger\_Service, CLS:FlyBitch”

### 3.3.3 BUTTON ASSIGNMENT

**“Button Assignment”** allows users to redefine the functions of the physical keys on the devices to trigger different actions.

- 1) Switch on “**Button Assignment Controls**”.
- 2) Edit the control options as desired.
- 3) Click the “**Add**” button to create new settings for redefining button actions.

Click the “**Remove**” button to reset the most recently created setting to the default.

Through the “**User-defined**” function, users can map the keys by entering the key code defined in the [Android operating system](#).

The package name and the class name for launching App settings:
