CASE STUDY

Paired with CipherLab's RK95 Series, Cadre Technologies Offers Cost-effective WMS Solutions for Warehousing Sector

The logistics and fulfillment business is all about efficiency, flexibility, and advanced capabilities. The ability to adapt to is what matters most to WMS solutions in particular. CipherLab has the flexibility to adapt due to years of experience in warehousing and logistics business and has worked closely with Cadre Technologies to deliver quality devices that help the company provide different solution offerings to cater to the needs of their customers in WMS applications.

Cadre Technologies is an industry leading innovator of warehouse management software for distribution in 3PL and 4PL logistics operations and online collaboration. Formed in April 2001 by warehouse management and logistics experts with decades of experience in distribution technology, the company specializes in real-time RF based warehouse management systems (WMS) that organize and order inventory, shipments, and workflow for distributors, 3rd party logistics companies, and manufacturers. All of these companies range in size from single operators to large enterprises and often allocate a part of their budgets to WMS solutions.

Paired with CipherLab's innovative and new RK95 series, Cadre Technologies can rest assured that their nearly two decades of experience will enable them to find the solution to meet their customer's requirements and that they will be getting quality devices and software at a lower cost. Besides the obvious price factor, product reliability and software compatibility are also key factors that determine success of WMS deployment.

Cadre Technology, working with CipherLab's RK95 series as a total solution, has built a solid, structured, and organized warehouse management system that helps customers lower cost while increasing overall productivity.
