

CASE STUDY

The RS35 Mobile Computers has Greatly Enhanced the Productivity for Inbound and Outbound Logistics in the Warehouse

Offering a broad range of supply chain solutions from integrated logistics and international freight forwarding to cross-border e-commerce and last-mile fulfillment, this logistics group is based in Asia and features a highly diversified business portfolio and strong coverage both in Asia and globally with presence in nearly 60 countries.

In addition to having used CipherLab's 1564A wireless Bluetooth handheld 2D barcode scanners for a long while, recently, this logistics group has gone further choosing CipherLab's RS35 touch mobile computers to replace its old mobile computers from another brand. To better cope with inbound logistics covering the transportation and storage of goods coming into the warehouse, and on the outbound side containing the transport of goods leaving the warehouse, this logistics group uses the CipherLab RS35 as it resolves the problems it was facing when using other mobile computers in terms of quality and stability. With the rapid growth of logistics demands in its service location in Thailand, this company had been seeking a mobile computer with high-quality hardware and stable software to manage its growing businesses in the region until being introduced to CipherLab's RS35 touch mobile computer. One of the main reasons the AER-certified RS35 was selected over other competitors was not only because it has enterprise-class features and rugged protection, but because it has the advantage of offering updated security patches for consistently for up to five years, which was essential to the company's devices remaining stable and secure.

We are thrilled to receive excellent feedback from this customer regarding the fact that the RS35 mobile computers have helped the staff increase productivity as they do not need to waste time swapping handheld scanners because the scanning function has been integrated into the mobile computer. Besides that, they reported that the stability of the RS35 allows the flow of their

work to be relatively smooth and trouble-free. The advanced reader engine of the CipherLab RS35 touch mobile computer gives them the ultimate in scanning performance, flexibility, and reliability.
