

## CASE STUDY

### World Renowned Smart Wearable Technology Manufacturer Deploys CipherLab's RS51 And Improves Data Capturing Efficiency

Headquartered in Kansas, USA, having more than 65 offices around the world, and with the mission to make products that are engineered on the inside for life on the outside, the company adopted CipherLab's RS51 in its Taiwan branch to help optimize the efficiency of capturing production line information. The company brings GPS navigation and wearable technology to the automotive, aviation, marine, outdoor, and sports industries as an essential part of customers' lives.

Having a principal need for capturing various types of data, the company requires a device that supports versatile data collection functionality. The CipherLab RS51, a rugged touch mobile computer, is capable of reading 1D/2D barcodes, RFID, and NFC applications, which is a perfect solution for the company's main demand: all data capturing needs provided in one device. There's no more problems scanning barcodes to check equipment or inventory information. The 4.7" display is easy for workers to read any broadcasted messages and important notifications. Furthermore, CipherLab's RS51 series perfectly blends commercial smartphone usability and enterprise functionality. The smartphone-like design means there's only minimal training required for the worker. Beyond that, the RS51 is built with the most reliable Wi-Fi and 4G/LTE connections for constant backend system data transmission and real-time communication.

Aside from its superior product functionalities, CipherLab also provides immediate support to any issues or questions raised by end users. We always do whatever we can to assist in solving any problems quickly in order to reduce any inconvenience that may cause any downtime or influence business operation. For that reason, the company has stated that it is very satisfied with customer service that we provide.
