

CASE STUDY

French Cabling and Communication Manufacturer Enhances its Warehouse Productivity with CipherLab 9700

The cabling manufacturer was established in 1987 in French, providing ICT and electro-technical solutions under the sectors of Building and Industrial Solutions of its conglomerate. The company offers cabling, connectivity and communication equipment for industrial, building and civil engineering. It is dedicated to continually update and optimize its products and services to meet the needs of a diverse range of clients and installations. It has four logistics centers with over 30,000 sqm storage area in France.

Having recently updated the WLAN environment in its warehouse, the company also wanted to update its WMS device to a reliable rugged mobile computer, packed with mid-range data capture capability. After evaluating the rugged handheld mobile computers on the market, CipherLab 9700 was introduced by its system integrator.

The company picked CipherLab 9700 as it is equipped with near/far 2D imager, which provides data collection in hard-to-reach places. Moreover, the readers have a special modular design that allows for fast replacements. The workers in its four warehouses use the 9700 to track its raw materials such as metal, ABS polymer and finished goods through the warehouses. It also helps with the controls of material receptions, expeditions, picking operations, transfers of stocks from place to place as well as final dispatch. Data collected from the scanned barcodes is transferred via the warehouse's WLAN network to the back office, ensuring full traceability of accurate products.

The 9700 is robust and reliable for its WiFi efficiency for real time data transferring. Most importantly, the 9700 comes with accessories including a 4-slot charging cradle, pistol grip, vehicle cradle, rubber protection and so on. These accessories enable the workers to work with ease, whenever they are on the premises.
